

Preprocessing TeDDi Sample

Chris Bentz

2/26/2024

Description

This file enables preprocessing of the TeDDi sample natural language text material. This is used as a sample to compare against the sign codings for proto-cuneiform and paleolithic sign sequences. Dumps of the TeDDi sample can be downloaded from <https://drive.switch.ch/index.php/s/MJv7xFkzqlzFn0y>. Note that the sample of TeDDi lines was here produced by using the following Perl commands in the directory where the lines.csv file is stored:

```
head -1 line.csv > line_sample.csv perl -ne 'print if (rand() < .01)' line.csv » line_sample.csv
```

This randomly samples 10% of the overall around 20 million text lines.

Session Info

Give the session info (reduced).

```
## [1] "R version 4.3.2 (2023-10-31)"  
## [1] "x86_64-pc-linux-gnu"
```

Load libraries

If the libraries are not installed yet, you need to install them using, for example, the command: `install.packages("ggplot2")`.

```
library(dplyr)
```

Load the TeDDi data

```
# load data from TeDDi dumps (takes a couple of minutes)  
line.data <- read.csv(  
  "~/Github/UpperPalCombinatorics/data/TeDDi/line_sample.csv")  
file.data <- read.csv("~/Data/TeDDi_dumps/file.csv")  
# merge the files  
teddi.data <- merge(line.data, file.data, by.x = "file_id", by.y = "id")
```

Further Sampling

Sample a given number of lines randomly as a comparative sample.

```
set.seed(15022018)
teddi.sample <- sample_n(teddi.data, 1000)
```

Further Preprocessing

```
# use only lines with at least two characters
teddi.clean <- teddi.sample[nchar(teddi.sample$text) > 1, ]
```

Simple Stats

Some simple stats of the textual data here sampled from TeDDi.

```
# lines of text
nrow(teddi.sample)

## [1] 1000

# unique ISO codes (i.e. languages)
unique(teddi.sample$iso639_3)

## [1] "rus" "ell" "kat" "fra" "tur" "jpn" "fin" "deu" "pes" "heb" "kor" "cmn"
## [13] "gug" "tha" "spa" "ind" "eng" "mya" "vie" "eus" "arz" "hin" "yor" "tgl"
## [25] "khk" "cha" "ram" "plt" "dgz" "hae" "jac" "apu" "amp"

# writing systems
unique(teddi.sample$writing_system)

## [1] "Cyr1" "Grek" "Geor" "Latn" "Jpan" "Arab" "Hebr" "Kore" "Hans" "Thai"
## [11] "Mymr" "Deva" "Hang"
```

Write to file.

```
write.csv(teddi.clean,
          file = "~/Github/UpperPalCombinatorics/data/TeDDi/final_sample.csv", row.names = F)
```
