

Stabilization Analyses

12/03/2024

Description

This file enables stabilization analyses for the feature value estimations. In other words, feature values are not estimated for a single, pre-defined number of characters, but are estimated for discrete steps (defined with “stepsize”), and for a given maximum number of characters (defined as “n”).

Load libraries

If the libraries are not installed yet, you need to install them using, for example, the command: `install.packages(“ggplot2”)`. For the Hrate package this is different, since it comes from github. The devtools library needs to be installed, and then the `install_github()` function is used.

```
library(stringr)
library(ggplot2)
library(plyr)
library(entropy)
library(ggExtra)
library(gsubfn)
```

```
## Loading required package: proto
```

```
# library(devtools)
# install_github("dimalik/Hrate")
library(Hrate)
```

Load Data

Read the preprocessed files with character strings per row.

```
# give file paths to the files to be processed
teddi <- read.csv("~/Github/UpperPalCombinatorics/data/TeDDi/final_sample.csv")
signbase <- read.csv("~/Github/UpperPalCombinatorics/data/signBase/signBase_randomized.csv")
cdli.urukV <- read.csv("~/Github/UpperPalCombinatorics/data/CDLI/UrukV/signs_clean.csv")
cdli.urukIV <- read.csv("~/Github/UpperPalCombinatorics/data/CDLI/UrukIV/signs_clean.csv")
cdli.urukIII <- read.csv("~/Github/UpperPalCombinatorics/data/CDLI/UrukIII/signs_clean.csv")
```

Preprocessing

```
# TeDDi
# select relevant columns
teddi.selected <- teddi[c("filename", "text", "writing_system")]
```

```

# rename columns
colnames(teddi.selected) <- c("id", "sequence", "subcorpus")
# add column which identifies the corpus
teddi.selected$corpus <- rep("TeDDi", nrow(teddi.selected))

# SignBase
signbase <- signbase[signbase$archaeological_unit == "Aurignacien", ]
signbase.selected <- signbase[c("object_id", "archaeological_unit", "site_name", "coding_clean")]
colnames(signbase.selected) <- c("id", "corpus", "subcorpus", "sequence")

# Proto-Cuneiform
## Uruk V
cdli.urukV.selected <- cdli.urukV[c("tablet.id", "signs.expand.vec")]
colnames(cdli.urukV.selected) <- c("id", "sequence")
cdli.urukV.selected$corpus <- rep("Proto-Cuneiform", nrow(cdli.urukV.selected))
cdli.urukV.selected$subcorpus <- rep("Uruk V", nrow(cdli.urukV.selected))
## Uruk IV
cdli.urukIV.selected <- cdli.urukIV[c("tablet.id", "signs.expand.vec")]
colnames(cdli.urukIV.selected) <- c("id", "sequence")
cdli.urukIV.selected$corpus <- rep("Proto-Cuneiform", nrow(cdli.urukIV.selected))
cdli.urukIV.selected$subcorpus <- rep("Uruk IV", nrow(cdli.urukIV.selected))
## Uruk III
cdli.urukIII.selected <- cdli.urukIII[c("tablet.id", "signs.expand.vec")]
colnames(cdli.urukIII.selected) <- c("id", "sequence")
cdli.urukIII.selected$corpus <- rep("Proto-Cuneiform", nrow(cdli.urukIII.selected))
cdli.urukIII.selected$subcorpus <- rep("Uruk III", nrow(cdli.urukIII.selected))

# Combined Data Frame
data.combined <- rbind(teddi.selected, signbase.selected, cdli.urukV.selected,
                      cdli.urukIV.selected, cdli.urukIII.selected)

```

Stabilization Analysis per Sequence

```

# set counter
counter = 0
# set the maximal number of characters (max.n), the minimum number (min.n),
# and the stepsize for stabilization analysis
# (i.e. in steps of how many units are values calculated?).
# Note: it should be the case that min.n >= stepsize
max.n = 200
